

ADD-ON · PROCUREMENT

Buy Quiet Procurement Kit

Noise control is far cheaper designed in than retrofitted. Compare supplier noise declarations and buy the quieter option before the order is signed, not after the machine is already on the floor.

What it is

A reference pack that lets a buyer compare the noise output of machinery before purchase, so noise control is designed out at the procurement stage rather than retrofitted later.

Who it's for

Facilities and engineering managers, and procurement leads, at manufacturing, engineering and processing sites who are specifying new plant, machinery or tooling.

What's delivered

- A noise-comparison checklist and supplier question set tailored to your sector.
- A short guidance note on reading manufacturer noise declarations — sound power vs sound pressure, test conditions.
- A one-page “Buy Quiet” policy template you can adopt internally.
- 12 months of email support for noise-related procurement questions.

PRICE

From £149

£149 for a single site, one sector — £299 for multi-site or multi-sector use.
